

Amendments to the Specification:

Please amend the "Abstract" as follows:

--The present invention relates to a device (1) for injection of a product, in particular for medical use. This device is intended in particular for allowing an intradermal injection to be performed, comprising:

—— a body (2) receiving a hollow injection needle (4) and a container (10) containing the product to be injected;

—— means (5 to 7; 28, 29) for holding the needle in position;

—— means (39, 41, 45) for holding the container (10) in position; and

—— a piston (11 engaged in the container (10);

—— characterized in that it additionally comprises:

—— first actuating means (42) of means (5 à 7; 28, 29) for holding the needle (4) in position;

—— second actuating means (32) of means (39, 41, 45) for holding the container (10) in position;

—— said first and second actuating means (42, 32) making it possible, at the end of the injection to respectively release the means 5 à 7; 28, 29) for holding the needle (4) in position before, or simultaneously to, the release of the means 39, 41, 45) for holding the container (10) in position;

—— a container support (9) which is mounted slidably on the body (2) and is displaceable relative to the latter in order to perform the injection;

Applicant: Lionel Vedrine
Application No.: 10/573,226
Filing Date: November 20, 2008
Attorney Docket No.: P-6156 (102-782 PCT/US RCE)
